

EMBRACE HARD

How hard things can be the best teacher for our creative mind

TransHu manism

We are on the verge of transHumanism. Replace our brains, bodies, organs. But until that happens we have one mind, and a body. How do we adapt to the changing landscape of things.

Inside our minds

A creative brain is like a landscape. It's either a wasteland, empty dry with nothing to see or identify. Or it's a beautiful jungle of many beautiful things that helps us connect things together and create more beautiful things.

A creative brain is like a landscape. It's either a wasteland, empty dry with nothing to see or identify. Or it's a beautiful jungle of many beautiful things that helps us connect things together and create more beautiful things.

The Landscape

How do we make this jungle?
By going out there in the world
and collecting different
experiences and finding
knowledge that resonates with
us. Keep adding more beauty till
the jungle starts growing on it's
own. All you have to do is just
add water.

The Jungle

Our challenge today is that thing called AI. It will either be a great tool that augments us or it will replace us. The key is one thing: YOU. How will you use it? The easy way or the hard way.

AI vs US

Easy is easy. Just let it start and finish the job. Fast, quick and done. But the issue here is that it benefited and you were the slave of the machine. Here the machine used you as its subordinate to get things done and you were the weak link.

Your brain lost the chance to do what it does best. Create worlds and ideas and bring value out of nothing.

We are not the weak link

See ideas are the most important thing humans do. When we work hard and do things right, we make life come to life. We create cars, rockets, computers, data centers, iPods, iPhones, fashion, health systems and the list goes on.

But if we recycle ideas and keep doing the same old things we die from the inside and nothing happens.

Who is the Creator?

What

makes a great brain?

Great mind needs a strong
body to keep it strong

Healthy Body

Being happy affects how we think. Happy thoughts equals happy ideation.

Happy Soul

You spend most of your life
around people you love. The
happier the times around them
the better the outcome.

Loving Family & Friends

Strong body, mind and spirit
means you are fully charged
and ready for anything that
comes your way.

Readiness

Curiosity is the gateway to
invite new ideas and chase
them down rabbit holes.

Curiosity

- Let ideas start with you before you use AI
- Wrestle thoughts in your brain and let them twist and shout. Your brain is a muscle. Stop using it and you will lose it.
- Always be reading, seeing, experiencing, living, being, listening,
- Discover things about you. What you like and what you don't. It will help you figure out life faster.
- Learn fundamental skills. They never go out of style.
- Erase time wasters from your life.
- Make the use of Double time.
- Always be learning. It compounds. 1% everyday.

Enjoy the ride

So one day when AI becomes powerful, it won't stand a chance to over power you because it will never have what you got. A living ecosystem of new ideas and a support system that helps you stay in the best zone to keep rejuvenating yourself and keep on pumping new energy to this world.

**We are
ready**

Gravity is a strong power.

A rocket needs to travel at 11km per second to escape it.

This is called Earth's escape velocity.

We are the same. We have a life's escape velocity. All humans are pulled back by this life gravity. And the only way to escape it is by working at a certain vibration we can escape it and soar high. So start building your engines the hard way.

Working against gravity

Thank u
